Contesting for the post of

General Secretary Sports and Games,
Technology Students' Gymkhana

Indian Institute of Technology Kharagpur
Academic Session: 2026-27

1. Boosting Inter-IIT Competitiveness through Professional Engagement and Action Plans

Objective:

To enhance the competitiveness of our Inter-IIT Sports Teams, I propose conducting more practice matches against external professional clubs to simulate the high-intensity environment of the Inter-IIT Sports meet, along with an exhaustive monthly review process to identify and resolve bottlenecks.

Current Scenario:

- At present, the preparation of contingent members is primarily confined to intra-team matches, which fails to create diversity in tactics, opponents and a high-pressure environment. Due to the above-mentioned bottlenecks, our contingents struggle to perform well in high-stakes knockout games. Inviting external teams for practice matches will help the contingent simulate realistic, diverse playing conditions, thereby enhancing our athletes' game awareness and competitiveness.
- The situation for racquet sports like Badminton, Squash, Lawn Tennis and Table Tennis is worse, with zero external teams for practice. The same goes for team sports like Volleyball.
- Currently, there is no standardised feedback system for Contingent Captains, Secretaries, and General Secretaries to identify and resolve bottlenecks and improve team performance.
- Lack of Standardized player performance metrics and match statistics not being consistently recorded has led to leakage of talent during team selections

Implementation:

A. Improving Match Readiness through External Competition

- The Technology Students' Gymkhana will establish Points of Contact with major sports clubs and teams from in and around Kolkata to invite teams.
- To convince the external teams to participate without monetary benefits. We shall leverage the "IIT Kharagpur" brand and premium facilities. Gymkhana will provide a one-time high-nutrition meal for travelling squads to maximise participation from top clubs and teams
- We shall leverage our Alumni network to cover funding gaps and their professional contacts to bring in elite coaching and training resources.
- Accommodation for the respective teams travelling to IIT Kharagpur will be provided in common rooms of Halls of Residence through the Hall Management Centre.
- A Performance Ledger will be created and regularly maintained to maintain match reports from external fixtures, ensuring meritocratic team selection. To ensure fairness and transparency, athletes will have access to track their individual progress, while Secretaries, PTIs, and Captains will utilise this data to conduct formalised performance reviews on a consistent basis.

B. The Inter-IIT Oversight Assembly

- Creation of an assembly involving the General Secretaries, Sports Secretaries, Inter-IIT Captains, PTIs, the Senior Sports Officer, and Rector Nominees. The assembly will act as a bridge between administration and athletes, ensuring every stakeholder is aligned towards the goal of winning the overall General Championship at the Inter-IIT Sports Meet.
- Allowing the committee to set clear performance targets and to strictly enforce deadlines for improvements.
- Comprehensive feedback forms will be circulated among all players prior to every assembly. The form's objective would be to gain insights into the quality of coaching, equipment requirements and team unity. The insights would be used by the assembly to set targets, identify potential bottlenecks, and develop strategies to address critical issues.
- Monthly reviews will be held during the third week of the Autumn Semester. Continuous assessment is crucial for identifying and resolving bottlenecks quickly, ensuring peak performance during the inter-IIT Sports Meet.

- The frequency of the reviews would increase as the Inter-IIT Sports Meet comes closer.

Impact:

- A diverse pool of external talent will enhance individual performance and refine team coordination under pressure.
- The use of Performance Ledgers will ensure a meritocratic and objective selection process, boosting player morale and team performance.
- Monthly meetings ensure that PTIs and student representatives are held accountable for performance targets.

Groundwork:

- Discussed with the Physical Training Instructors of all sports and Inter-IIT captains to understand how feasible it is to host external teams.
- Spoke to General Secretaries Sports, and current Inter IIT Contingent Captain to understand how feasible the monthly review committee would be and what kind of impact it can have with the stakeholders mentioned in the proposal.
- Spoke with the HMC regarding the possibility of arranging temporary accommodation for visiting teams during practice games.
- Reached out to different sports clubs in Kolkata across various sports to check feasibility and also worked on a tentative budget.

2. Inter-Hall General Championship Sports: Strengthening Professionalism and Recognition

Objective:

To transform the Inter Hall General Championship into a high-profile sporting league with live broadcasting, real-time engagement, and a modern reward system. This initiative seeks to enhance the number of students participating in the event, secure corporate sponsorships, and celebrate the diversity of the sporting community.

Current scenario:

- Currently, Inter-Hall Competitions are extremely competitive but lack visibility beyond the participants and a handful of hall-mates. Without proper live broadcast or commentary, the skill and drama of the GC competitions remain confined to the court-side.
- Our current awards focus only on winning teams, with a single trophy for the MVP. As a result, we overlook the individual brilliance of other players whose contributions made the team's wins possible.
- As the matches are not broadcast or professionally documented, sponsorship funding opportunities are lost from sports brands and sponsors who would like their brands represented in front of 15,000+ students.

Implementation:

- We will broadcast matches via the IIT KGP Sports YouTube channels and display them on TVs in various locations across IIT KGP to increase awareness of the current matches being played among the general student body. This will include student-led commentary, digital score overlays, and post-game Player of the Match interviews to foster a professional atmosphere similar to that of national-level sports events.
- We will not be limited to the conventional Winner/Runner-up trophies alone. New categories of awards will be created:

    - The Emerging Athlete Award is for 1st and 2nd-year students with tremendous potential.
    - Awards for the best PG/RS player will help enhance their participation.
    - The Wall of Defence Trophy will honour defenders, goalkeepers, and liberos who often don't get the spotlight.
    - The Spirit of Gymkhana Award will be presented to the hall that demonstrates the best sportsmanship and discipline.
- A dedicated sponsorship deck will be developed exclusively for the Inter-Hall GC, propositioning the title sponsorship opportunities for major tournaments (e.g., The [Brand Name] Inter-Hall Cricket General Championship), leveraging live-stream viewership and on-ground branding as key value drivers to fund equipment and prize expenses.
- A special section of the Gymkhana Website would be created where the season's highlights, record-breaking statistics, and hall standings would be updated in real-time, so that the alumni and off-campus students can keep abreast of their hall's performance.

Impact:

- We anticipate a significant increase in footfall, since professional commentary and live updates will attract more active viewers from previously passive students. enhancing Hall Spirit and positioning the General Championship as an integral part of campus life.
- This proposal aims to boost sports participation across the student body, specifically among Freshers, Post-Graduates and Research Scholars, thereby strengthening our contingent for the Inter-IIT Sports Meet.
- Successful sponsorship integration would reduce the Technology Students' Gymkhana's budget burden, enabling higher-quality equipment, better jerseys, and professional-grade officiating for all inter-hall matches.

Groundwork:

- I have discussed with multiple stakeholders, including the current and previous Technology Coordinators, Technology Students' Gymkhana, regarding the feasibility of the extension. The systems have been built, and the integration is the main hurdle left.

- I have reached out to 4 potential corporate sponsors from different sectors (Nutraceuticals, Energy Drinks, and Sports Gear) that actively seek student engagement opportunities at IITs, and have received positive responses.
- I have also conferred with the stakeholders of the Audio-Visual Cell and confirmed the feasibility of the same
- I have researched local sports trophy and apparel vendors to conduct a cost-benefit analysis of introducing new award categories.

3. Digitising Gymkhana Gym Registration and Access

Objective:

To tackle the current manual, tiring, and slow registration process for Technology Students' Gymkhana's Gymnasium membership by implementing an integrated digital platform. This platform will automate the entire process of slot booking from user account creation to online payment processing by an independent TSG-managed system, which will increase its transparency, efficiency, and fairness. It will also lay the foundation for similar platforms for all other amenities provided by the Technology Students' Gymkhana.

Current scenario:

- The current process is very demanding for applicants, requiring the physical collection and submission of forms and the printing of a UPI payment screenshot. This process is unnecessarily slow and complicated.
- The current system lacks transparency, with no real-time tracking of gym slot occupancy. Without a dynamic, up-to-date booking system, some slots become overcrowded, leading to inefficiency in training and frustration.
- With the current entry verification system at the gym gate, maintaining a smooth experience for the registered students is difficult. The current system leads to an improper use of our campus's resources.

Implementation:

- We plan to develop a separate "Gymnasium" section on TSG's website where users can create their profiles. These accounts will let users access these things at their fingertips and help Gymkhana become independent of external servers. This system will lay the foundation for similar implementations in other sports, such as Badminton and Lawn Tennis.
- We plan on replacing hard-copy submissions of passport-sized photos, forms such as the Medical certificate, No Objection Certificate, and membership form,

with their digital counterparts. Students will be prompted to submit these forms, photos, and declarations online.

- To automate the payment process, we will add a secure payment gateway to the online form, redirecting payments to the account of the Associate President of Technology, Student's Gymkhana. Upon a successful transfer, a digital entry pass with a unique Registration ID will be generated for each applicant.
- All users can track real-time occupancy for each 45-minute slot on their dashboards. Each slot will have a fixed capacity, and we will reflect the number of vacancies left in that slot to prevent overcrowding and maintain a balanced workout environment.
- To ensure fairness to registered users, we plan to maintain digital records of name, Registration ID, Roll Number, and phone number. Each member's credentials will be verified to eliminate unauthorised access.

Impact:

- This will significantly reduce the time and effort required to secure a Gymnasium slot, encouraging more students to pursue fitness.
- Digital tracking of registrations across time slots will help Gymkhana identify peak rush hours. This data will help Gymkhana make informed decisions on the budget for infrastructure and equipment.
- The automation of this system will ensure a just and equitable distribution of slots.

Groundwork:

- I have discussed this proposal with PTI Gymnasium and Weightlifting regarding the implementation of this proposal.
- I have discussed with multiple stakeholders, including the current and previous Technology Coordinators and the Secretary of the Web, Technology Students' Gymkhana, regarding the feasibility of the extension. The systems have been built, and the integration is the main hurdle left.
- I have rigorously reviewed both the new digital system and the previous physical workflow in the guidance of General Secretaries and ensured that every necessary field is implemented in the new online process to keep the migration smooth.
